(54) Title: STOCK SHAPE FOR MACHINING AND PRODUCTION PROCESS THEREOF

(57) Abstract: A stock shape for machining, which is composed of an extruded product of a resin composition comprising 30 to 94 % by mass of a thermoplastic resin (A), 5 to 40 % by mass of a carbon precursor (B) having a volume resistivity of  $10_2$  to  $10_{10}$   $\Omega$ cm and 1 to 30 % by mass of a conductive filler (C) having a volume resistivity lower than  $10_2$   $\Omega$ cm and has a thickness or diameter exceeding 3 mm, and a process for producing the stock shape by extrusion and solidification of the resin composition.
